

New Product Development with Customers at the Core

We are committed to delivering products which facilitate our customer's success. We know that placing customers at the core of our product development is the only way to ensure we address the true pain points and develop products suited to our customer's needs. We are looking to engage customers in our product development process. Are you interested?

Value Proposition

We are developing a cloud solution to support and accelerate compliant digital adoption in the life sciences sector.

For many companies the process of developing, deploying, or integrating new cloud-based solutions in strict regulatory environments can be daunting and complex. We are diversifying and expanding our existing offering to guide the correct building and management of qualified cloud infrastructure which can form the foundation for your validated applications.

Our platform will guide you as you build fit-for-purpose qualified and compliant cloud infrastructure. It will support the approval workflow process, it will manage change, protect access, and log audit applicable evidence. The purpose of our solution is to support environments where compliance controls need to be seamlessly implemented and maintained with the freedom to innovate, invent, develop and manufacture high quality life sciences products.

Product Validation and Early Adopter Program

"Early Adopters" will be companies who are willing to become part of a mutually beneficial relationship and who are willing to provide us constructive feedback and insights on our concept, design, and prototypes. In return for this valuable input, our early adopters will receive preferential pricing on product release, early access to all upgrades and new versions, and collaborative marketing exposure.

About our program

Who is it for?

- If you are an advocate for digital transformation in your life sciences organisation, understanding implicitly the need for compliance and would benefit from influencing how a guidance and governance product could be developed to accelerate your vision.
- If you have quality and compliance responsibilities for cloud-based infrastructure and would benefit from influencing the development of a product which would give you full visibility and control.
- If you are developing a cloud solution which services life sciences and need to provide evidence of the qualification of your infrastructure as the foundation to your validated application.
- If you are enthused by innovative product development for life sciences.

What is involved?

- 1hr Voice of the Customer sessions every 4 weeks
- Program will run for approximately 6 months
- Program will be made up of a few journey stages:
 - Stage 1: Exploring the challenges and defining the opportunity
 - Stage 2: Exploring functional scope, features, and benefits
 - Stage 3: Pilot implementation
 - Stage 4: Feedback and evolution
 - Stage 5: Business model innovation

Contact

Register your interest ["HERE"](#) and we will get in contact with you.

Unfortunately, we will have limited availability for participation, but we will do everything we can to accommodate interested customers and industry influencers.
